## About us

The wulf architekten office was founded by Tobias Wulf in 1987. Approximately 140 employees from more than 20 nations are employed in the planning teams of our offices in Stuttgart, Berlin and Basel (CH). Currently the office is managed by Tobias Wulf, Jan-Michael Kallfaß, Ingmar Menzer and Steffen Vogt.

Our work spectrum embraces a variety of sophisticated building assignments. Our architecture is characterized by clarity and comprehensiveness – we also search for simple solutions for complex assignments, ever aware of the finite nature of our resources. Ecological aspects are a fundamental component of our planning. We are committed to sustainable architecture and conduct projects in accordance with circular economy. We are also a member of the German Sustainable Building Council e.V. (DGNB) and the EGNATON e.V.

Stuttgart - Bosch-Areal ↗ →

## About us

Our commitment to quality is based on the continuity of our work throughout all project phases. Functionality and economy are the foundation for the development of high quality architecture – although this is never the sole objective.

In addition to our office activity, we are also involved in instruction, in professional organizations, as specialist judges and in design committees. In the past years our projects have been honored with more than 200 awards.

Berlin - Kreuzberg ↗  
Basel - Kleinbasel →

## Our precepts

Concept – we work conceptually, not commercially

Context – we view every building as part of its context

Resources – we are mindful of the finite nature of our natural resources

Vision – we look to the future while respecting architectural history

Structure – the building structure follows the intrinsic logic of the task

Form – the form is not the basis but rather the result of our exploration search

Space – the space should create an atmosphere that appeals to the senses

Type – we strive for strong ideal typologies.

Flexibility – a sustainable building enables different uses

Complexity – the process is complex, the solution is simple

## Completed buildings (since 2017, selection)

### Bavarian State Police Passau, 2022

The clearly defined rectangular contour parallel to Karlsbader Straße creates an ordering structure in the urban environment. The height graduation and horizontal structuring of the facade, create an exciting dialogue with the ground slope. A consistent high grade appearance is created by the chosen integrative building type. The new building, consistently designed as a courtyard, does not fall into a main and a garage building, but combines the different uses into a coherent structure. The advantage of the courtyard type is also evident: as the new building is designed as a whole, the secured police yard areas, which are usually located in front of the building and impair the urban environment, can be eliminated.

#### Competition

08 2010, 1th prize

#### Bauherr

Staatliches Bauamt Passau

#### GFA

25.969 sqm

#### Location

Karlsbader Straße 11, 94036 Passau

### Fire Station Straubenhardt, 2022

The new fire station brings together six previously independent firefighting units at one strategically located site on Langenalberstraße. The project was designed with the goal of implementing circular construction and sustainable planning in accordance with the 'Cradle to Cradle' principle. A wooden construction rises above the massive concrete plinth and is encased in a homogeneous façade of white expanded metal.

#### VgV procedure

04 2017

#### Client

Gemeinde Straubenhardt

#### GFA

5.906 sqm

#### Location

Langenalber Straße 67, 75334 Straubenhardt

### Canteen and Media Center Darmstadt, 2021

The Canteen and Media Center defines the entry condition of the school campus. With its wooden structure, its folded glass facades, and cladding of perforated black corrugated metal, the solitary building has an open and elegant appearance. The orthogonal grid of glulam beams shapes the spatial impression. One grid of 3x3 meters establishes the basic module of the structuralist overall concept and is associated with a seating group in the cafeteria. The grid is rotated 45 degrees, resulting in the serrated contour.

#### Competition

06 2016 4th prize, 1st rank after VgV procedure

#### Client

Wissenschaftsstadt Darmstadt c/o Projektmanagement Darmstädter Stadtentwicklungs GmbH & Co. KG

#### GFA

3,531 sqm

#### Location

Alsfelderstraße 23, 64289 Darmstadt

### GESIS Leibniz-Institut Mannheim, 2021

The new building for GESIS – Leibniz Institute for the Social Sciences comprises flexibly usable office space, laboratories, and open communication zones in a consolidated floor plan. The L-shaped structure connects to the University of Mannheim's research and teaching building (2017), corresponding to its structural configuration and facade. The inside of the block's perimeter becomes a publicly accessible courtyard.

#### Direct commission, follow-up contract

02 2017

#### Client

Leibniz-Institut für Sozialwissenschaften Gesis, represented by Vermögen und Bau BW Amt Mannheim und Heidelberg

#### GFA

7,010 sqm

#### Location

B6, 4-5, 68159 Mannheim

# Completed buildings (since 2017, selection)

## Sports Center for Überlingen School Campus, 2020

The new sports center for the school campus in Überlingen consists of a three-court gymnasium, a gymnastics hall, and a ball sports hall. With its facade of white expanded metal, the sports center presents itself as an elegant solitaire. The distinctive folded roof, which grows out of the cube as a jagged wooden construction, gives structure to the built form.

### VgV procedure

11 2016

### Client

Große Kreisstadt Überlingen

### GFA

5,600 sqm

### Location

Rauensteinstraße 2, 88662 Überlingen

## Office and Commercial Building Stiftstraße 3 Stuttgart, 2019

The new building completes the area in the Stuttgart city center between Königstraße, Stiftskirche and market square. The shell limestone facade reflects the characteristic architectural language of the 1950s. At the same time, the cube is distinctly located in contemporary architecture.

### Competition (multiple commission)

09 2015, 1st prize

### Client

Aachener Grundvermögen Kapitalverwaltungsgesellschaft mbH

### GFA

2,440 sqm

### Location

Stiftstraße 3, 70173 Stuttgart

## Customer Center Bosch Autom. Steering Schw. Gmünd, 2019

The spatial and structural reorganization of a portion of the Bosch Automotive Steering premises comprises a new customer center, a new reception building, a parking garage, as well as the redesign of the open spaces. The new structures are integrated into the valley as an organically flowing formation. Their convex curved glass facades are designed with perforated, rotatable vertical slats in front, which filter the surrounding space.

### Competition (multiple commission)

10 2012, 1st prize

### Client

Robert Bosch Automotive Steering GmbH

### GFA

32,422 sqm

### Location

Richard-Bullinger-Straße 77, 73527 Schwäbisch Gmünd

## Four Primary Schools in Modular Design Munich, 2017

One modular design has been created for four primary schools which have been built simultaneously on different locations in Munich. The architectural concept is based on the 'learning house concept' and has been developed for a learning house unit that is intelligent, energy-saving and well engineered. The barrel vaulting creates spaces with a distinctive character.

### Competition

10 2013, 1st prize

### Client

Landeshauptstadt München,

Baureferat Hochbau

### GFA

42,115 sqm

### Location

Aubinger Allee, Bauhausplatz, Ruth-Drexel-Straße, Gustl-Bayrhammer-Straße, Munich

## Ongoing projects (selection)

Business Quartier  
»HaidPark«  
Freiburg, since 2022

The urban spaces are demarcated by four clearly defined structures whose positioning and variations in height create a green oasis within the 1.4-hectare site. The ground floor is designed primarily for public use, with facilities such as a conference center, restaurants, cafés, and various services. The uppermost floors distinctively and iconically top off each of the buildings with office lofts, a coworking lounge with roof terrace, and a biodiversity roof that complement the flexibly adaptable standard floors.

Competition  
11 2022, 1st prize  
Client  
STRABAG Real Estate Invest GmbH  
GFA  
ca. 38,000 sqm

Office Building STIHL  
Waiblingen, since 2022

The new office building for the chainsaw manufacturer STIHL is the distinguished prelude to their factory grounds Waiblingen Neustadt, near Stuttgart. Thanks to both its topographical location and its urban position, it defines another entrance to the factory site. The new facility takes up the building lines of the existing factory halls, creating a forecourt in the northern unbuilt area that can also serve as a gathering place and site for events. The five-story office building is conceived as a modularly configured hybrid timber structure whose load-bearing structure and building services are left visible, thus serving as space-defining features.

Competition  
07 2022, 1st prize  
Client  
Andreas STIHL AG & Co. KG  
GFA  
ca. 16,630 sqm

Main Fire Station  
Trier, since 2022

The main fire station with a paramedic services unit and integrated command center is to be built at a new site directly across from the Imperial Baths, a UNESCO World Heritage Site. Our design, creates an architectural figure that stands confidently beside the Roman architectural monuments without dominating the urban landscape or obstructing historical lines of sight. With recesses cut into the upper floors, the four-story building responds to the adjacent built fabric. The serene brick facade with perforated window bands picks up on the predominant historical material from the surroundings.

Competition  
07 2022, 1st prize  
Client  
Stadt Trier  
GFA  
ca. 22,600 sqm

IT- and Computing Center for the University of Mannheim  
since 2020

The new building for the University of Mannheim's IT and computing center presents itself as a compact and yet transparent four-story structure that is clearly recognizable as a modular hybrid wood building. The IT help center, seminar and training rooms, workstations for students as well as office spaces and open communication areas are comprised in the consolidated floor plan. The BNB certificate Silver is envisaged.

Client  
Vermögen und Bau Baden-Württemberg  
Amt Mannheim und Heidelberg  
GFA  
ca. 6,870 sqm

## Ongoing projects (selection)

### New BFH Campus Bern, since 2019

The Departments of Health Professions, Social Work, and Business, along with faculties of the Bern University of the Arts (HKB), the president's office, and supporting services will now be accommodated in a tripartite structure. The three cubes, which correspond to the functional divisions, are linked together by a common plinth of precast concrete. Parallel to the campus park is an internal access road, which functions as the university's main artery.

#### Competition

01 2019, 1st prize

#### Client

Amt für Grundstücke und Gebäude des Kantons Bern (AGG)

#### GFA

ca. 81,000 sqm

### Rheinpfalz Police Headquarters, Ludwigs- hafen, since 2018

The 12-story structure for the new Rheinpfalz Police Headquarters comprises the administration, the operations management and the criminal investigation department. The building marks the terminus of a spatial axis within the city. The vertical windows are framed by prefabricated concrete elements. Each of the floors is separated from the others by a joint, emphasizing the building's tectonic character. The extensive room program is arranged according to the functional structure in the two parts of the building.

#### Competition

02 2018, 1st prize

#### Client

Landesbetrieb Liegenschafts- und Baubetreuung, Niederlassung Landau

#### GFA

ca. 30,380 sqm

### Institute of Food Safety and Food Hygiene

Berlin, since 2018

The construction of a new laboratory and teaching building on the Düppel Campus of Freie Universität Berlin in Steglitz-Zehlendorf is intended to spatially bring together the Department of Veterinary Medicine and improve cooperation with other institutes. The shape of the folded roof takes up the predominant design vocabulary of the surroundings. The resulting greater height allows to arrange the technical areas as a part of the building structure and directly next to the laboratory zones. The BNB certificate Gold is envisaged.

#### Competition

06 2018, 1st prize

#### Client

Senatsverwaltung für Stadtentwicklung und Wohnen, Berlin

#### GFA

ca. 3,860 sqm

### Historical Oberamteistraße Reutlingen, since 2018

The patrician homes at Oberamteistraße 28-32 are one of the oldest continuous rows of half-timbered houses in southern Germany. They are being structurally stabilized and renovated in conformity with monument preservation requirements. A new structure above the archaeological site at Oberamteistraße 34, with exact the same volume of the corner house demolished in 1972, supplements the row of houses. The new building consists of a wooden framework, cast-glass shingles wrap the structure like a glass skin. Thus it appears spherical and displays a figurative reminiscence of the lost building.

#### Competition

12 2017, 1st prize

#### Client

Stadt Reutlingen

#### GFA

ca. 260 sqm new structure

ca. 610 sqm existing structures

## Ongoing projects (selection)

HPC Helmholtz Pioneer Campus  
Munich, since 2017

The new construction of a laboratory building for diabetes research is to be a special component of the existing Neuherberg Campus near Munich. With its publicly accessible cafeteria on the ground floor, the diamond-shaped Helmholtz Pioneer Campus building fits into the rectangular structure and also sets an accent for the newly emerging Gaborplatz. Openly and flexibly designed working spaces with laboratories, offices and communication areas are arranged on the upper floors. The BNB certificate Silver is envisaged.

08 2017, 1st prize  
Client  
HMGU (Helmholtz-Zentrum für Gesundheit und Umwelt), München  
GFA  
ca. 10,760 sqm

North vocational school center Darmstadt, since 2016

The vocational school center with its distinctive shed roofs is located on a huge, flat cultivated field that extends over an area of around 100 × 100 metres. The merging of the schools on the existing, dense construction site also corresponds to the content: The existing structure is taken up and reinterpreted, the development principle is reversed. For this purpose, the existing borders in the main development axis will be abolished, the magistral will be strengthened and a connection between the three buildings will be developed. The refurbishment is being carried out in three construction phases, the middle block has already been completed.

ca. 680 sqm existing structure

Generaloberst-Beck-Kaserne Sonthofen, since 2008

Based on our master plan, the property of Generaloberst-Beck-Kaserne (the former Ordensburg Sonthofen) is being restructured and expanded. The buildings from the time of National Socialism are listed as historical monuments. Extensive new construction measures will supplement the property. In the dialogue between old and new, a critical examination of the problematic architectural heritage becomes noticeable.
